# **Mathematics Chart**

## LENGTH

## Customary

| 1 kilometer = | 1000 meters |
|---------------|-------------|
|               |             |

**Metric** 

1 meter = 100 centimeters

1 centimeter = 10 millimeters

1 mile = 1760 yards

1 mile = 5280 feet

1 yard = 3 feet

1 foot = 12 inches

## CAPACITY AND VOLUME

### Metric

## Customary

1 liter = 1000 milliliters

1 gallon = 4 quarts

1 gallon = 128 fluid ounces

1 quart = 2 pints

1 pint = 2 cups

1 cup = 8 fluid ounces

## MASS AND WEIGHT

## Metric

## Customary

1 kilogram = 1000 grams

1 ton = 2000 pounds

1 gram = 1000 milligrams

1 pound = 16 ounces

## TIME

- 1 year = 365 days
- 1 year = 12 months
- 1 year = 52 weeks
- 1 week = 7 days
- 1 day = 24 hours

1 hour = 60 minutes

1 minute = 60 seconds

Metric and customary rulers can be found on the separate Mathematics Chart.

|                                   | cone (lateral)                       | $S = \pi r l$  |  |  |  |  |  |  |  |  |
|                                   | cone (total)                         | $S = \pi r l + \pi r^2$ or $S = \pi r (l + r)$                 |  |  |  |  |  |  |  |  |
|                                   | sphere                               | $S = 4\pi r^2$   |  |  |  |  |  |  |  |  |
| Volume                            | prism or cylinder                    | V = Bh   |  |  |  |  |  |  |  |  |
|                                   | pyramid or cone                      | $V = \frac{1}{3}Bh$  |  |  |  |  |  |  |  |  |
|                                   | sphere                               | $V = \frac{4}{3}\pi r^3$                                       |  |  |  |  |  |  |  |  |
| Special Right Triangles           | $30^{\circ},60^{\circ},90^{\circ}$   | $x, x\sqrt{3}, 2x$   |  |  |  |  |  |  |  |  |
|                                   | $45^\circ$ , $45^\circ$ , $90^\circ$ | $x, x, x\sqrt{2}$  |  |  |  |  |  |  |  |  |
| Pythagorean Theorem               |                                      | $a^{2} + b^{2} = c^{2}$  |  |  |  |  |  |  |  |  |
| Distance Formula                  |                                      | $d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$                     |  |  |  |  |  |  |  |  |
| Slope of a Line                   |                                      | $m = \frac{y_2 - y_1}{x_2 - x_1}$                              |  |  |  |  |  |  |  |  |
| Midpoint Formula                  |                                      | $M = \left(\frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2}\right)$    |  |  |  |  |  |  |  |  |
| Quadratic Formula                 |                                      | $x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$                       |  |  |  |  |  |  |  |  |
| Slope-Intercept Form of           | an Equation                          | y = mx + b   |  |  |  |  |  |  |  |  |
| Point-Slope Form of an            | Equation                             | $y - y_1 = m(x - x_1)$   |  |  |  |  |  |  |  |  |
| Standard Form of an Eq            | uation                               | Ax + By = C  |  |  |  |  |  |  |  |  |
| Simple Interest Formul            | a                                    | I = prt  |  |  |  |  |  |  |  |  |

## **Mathematics Chart**

#### DIRECTIONS

Read each question. Then fill in the correct answer on your answer document. If a correct answer is <u>not here</u>, mark the letter for "Not here."

#### SAMPLE A

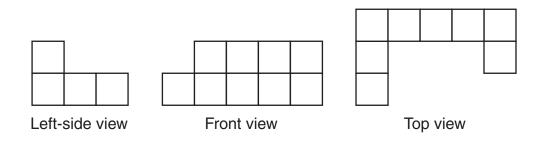

Find the slope of the line 2y = 8x - 3.

- $\mathbf{A} \quad -\frac{3}{2}$
- **B** 4
- **C** 8
- **D** Not here

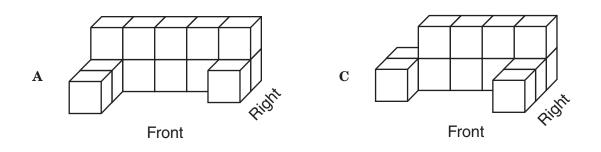

#### SAMPLE B

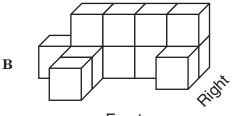

Janice uses a rectangular box to store her art supplies. The dimensions of the rectangular box are 22.5 inches by 14 inches by 11.5 inches. What is the volume of this box in cubic inches?

Record your answer and fill in the bubbles on your answer document. Be sure to use the correct place value. **1** The drawings below show the left-side, front, and top views of a three-dimensional structure built with identical cubes.

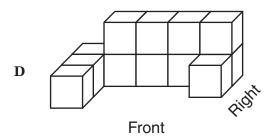

Which of the following 3-dimensional structures is best represented by these views?

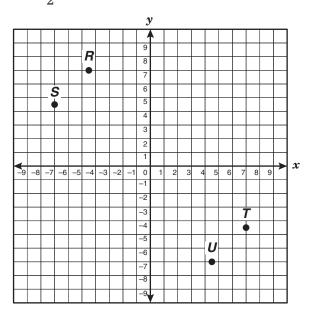

2 Which point on the grid below best represents  $(-4\frac{1}{2}, 7)?$ 

- **F** Point R
- G Point S
- **H** Point T
- **J** Point U

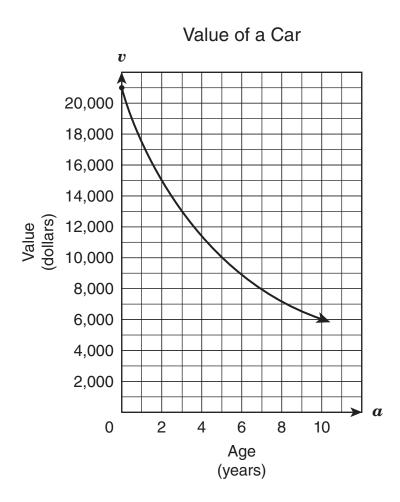

- 3 Chantelle won 9 of 15 tennis games she played. At this rate, which of the following is the best prediction of the number of tennis games she will win out of her next 12 games?
  - **A** 4
  - **B** 7
  - **C** 11
  - **D** 6

- 4 The original function  $y = \frac{2}{5}x + 4$  is graphed on the same grid as the new function  $y = \frac{5}{2}x + 4$ . Which of the following statements about these graphs is true?
  - **F** The graph of the original function is steeper than the graph of the new function.
  - **G** The graph of the original function is parallel to the graph of the new function.
  - **H** The graphs intersect at (4, 0).
  - $J \quad The graphs intersect at (0, 4).$

- 5 Millie entered her dog in a dog show. Her dog got a score of 64. Which measure of data can Millie use to determine whether her dog's score was in the top half of all scores at the show?
  - A Median
  - **B** Mode
  - C Mean
  - **D** Range
- 6 Dante has 5 times as many marbles as Kenny. Juan has  $\frac{1}{3}$  as many marbles as Dante. If Kenny has 30 marbles, how many marbles does Juan have?
  - **F** 6
  - **G** 50
  - **H** 2
  - **J** 18

7 The graph below shows the relationship between the value of a car in dollars and the age of the car in years.

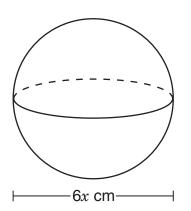

According to the graph, which of the following statements appears to be true?

- **A** The value of the car decreased by \$1,000 per year.
- ${\bf B}$   $\;$  The value of the car decreased by \$2,000 per year.
- C The value of the car decreased more from Year 9 to Year 10 than in any other year.
- **D** The value of the car decreased more from Year 0 to Year 1 than in any other year.

8 A sphere with a diameter of 6*x* centimeters is shown below.

Which of the following expressions best represents the volume of this sphere in cubic centimeters in terms of  $\pi$ ?

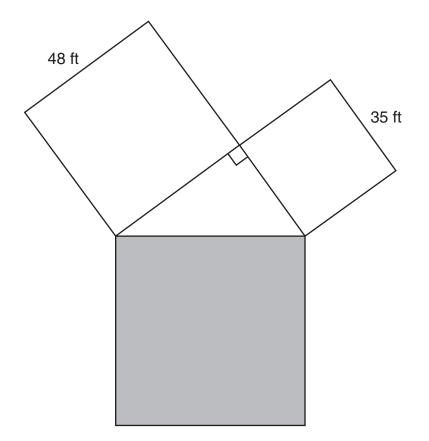

- $\mathbf{F} \quad \frac{4}{3}\pi(3x)^3$
- $\mathbf{G} \quad \frac{4}{3}\pi(6x)^3$
- **H**  $4\pi(3x)^2$
- **J**  $4\pi(6x)^2$

- **9** Josh earns money by washing cars in his neighborhood. He spent \$215 on supplies and charges \$15 for each car washed. Josh's profit, p, can be represented by the function p = 15n 215, where n represents the number of cars that Josh washes. What is the minimum number of cars Josh must wash to make a profit?
  - **A** 14
  - **B** 29
  - **C** 15
  - **D** Not here

- 10 Which expression is equivalent to -7(x-2) + 5(3-x) 4x?
  - $\mathbf{F} \quad -16x + 1$
  - **G** -16x + 29
  - $\mathbf{H} \quad -2x + 1$
  - **J** -12x + 13

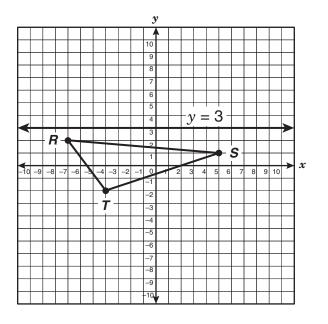

11 The drawing below shows three squares joined at their vertices to form a right triangle.

What is the area of the shaded square?

- **A**  $3529 \text{ ft}^{2}$
- **B**  $1079 \text{ ft}^{2}$
- $C = 6889 \text{ ft}^{2}$
- **D** 169 ft<sup>2</sup>

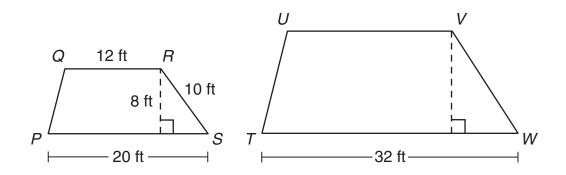

If  $\triangle RST$  is reflected across the line y = 3, which of the following ordered pairs best represents point T'?

- **F** (-4, 8)
- **G** (-4, 2)
- **H** (10, -2)
- **J** (4, -2)

- **13** Kara claims that the expression  $x^2 + 1$  results in an even number for all integer values of *x*. Which value of *x* shows that Kara's claim is incorrect?
  - $\mathbf{A} \quad x = 5$
  - $\mathbf{B} \quad x = -3$
  - $\mathbf{C} \quad x = 0$
  - $\mathbf{D} \quad x = -1$

- 14 A salesperson's commission, c, is 6% of her total sales, s. Which function best represents the salesperson's commission?
  - $\mathbf{F}$  c = 0.06s
  - **G** c = s + 0.06
  - **H** c = s + 0.06s
  - $\mathbf{J} \quad c = \left(\frac{6}{s}\right) \left(100\right)$

What is the height of the larger trapezoid?

- $\mathbf{A} \quad 19\frac{1}{5} \; \mathrm{ft}$
- **B** 16 ft
- $\mathbf{C} \quad 12\frac{4}{5} \; \mathrm{ft}$
- **D** 20 ft

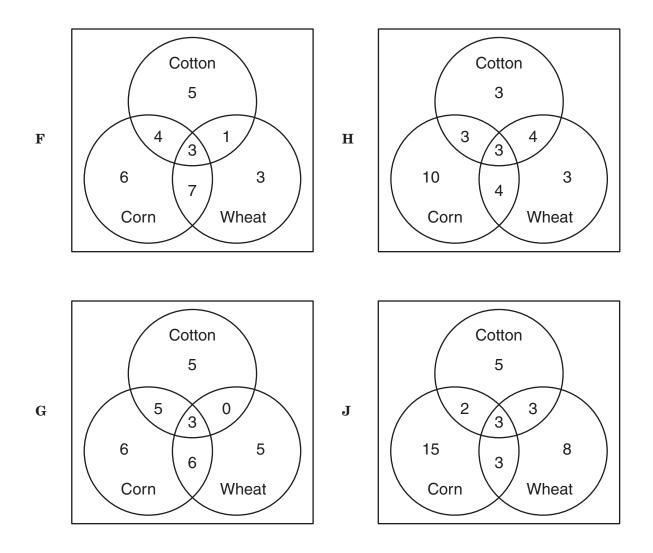

- **16** How does the graph of  $y = 3x^2 5$  compare with the graph of  $y = 3x^2 + 8$ ?
  - **F** The graph of  $y = 3x^2 5$  is 3 units above the graph of  $y = 3x^2 + 8$ .
  - **G** The graph of  $y = 3x^2 5$  is 13 units below the graph of  $y = 3x^2 + 8$ .
  - **H** The graph of  $y = 3x^2 5$  is 3 units to the right of the graph of  $y = 3x^2 + 8$ .
  - **J** The graph of  $y = 3x^2 5$  is 13 units to the left of the graph of  $y = 3x^2 + 8$ .

- **17** If today is Tuesday, what day of the week will it be 100 days from today?
  - A Tuesday
  - ${\bf B} \quad {\rm Wednesday} \quad$
  - C Thursday
  - **D** Friday

- **18** A county commissioner surveyed the farmers in her county about the crops they grow. The results of the survey are shown below.
  - A total of 13 farmers grow cotton.
  - A total of 14 farmers grow wheat.
  - A total of 20 farmers grow corn.

Some farmers in the list above grow more than 1 crop. Exactly 3 of the farmers in the list above said that they grow all 3 crops. Which of the following Venn diagrams could not represent this situation?

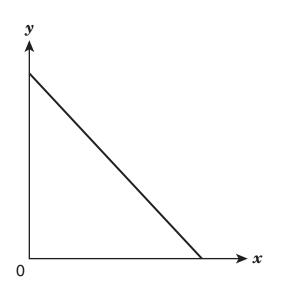

**19** In the equation 6.5x + 1.4y = 59, what is the value of *x* when y = 5?

Record your answer and fill in the bubbles on your answer document. Be sure to use the correct place value.

**20** The function graphed below shows a relationship between *x* and *y*.

Which of the following relationships can best be represented by this graph?

- **F** The total number of gallons of gas left in a gas tank, y, based on x, the total number of miles driven
- **G** The total cost of a shipment of jeans, *y*, based on *x*, the number of jeans in the shipment
- **H** The total amount of hourly earnings, *y*, based on *x*, the total number of hours worked
- **J** The total number of pounds of flour used, *y*, based on *x*, the total number of loaves of bread baked

- **21** If the diameter of a circle is dilated by a scale factor of 0.6, what will be the effect on the circle's circumference?
  - **A** The circumference will be 0.3 times as large.
  - **B** The circumference will be 0.36 times as large.
  - **C** The circumference will be 1.88 times as large.
  - **D** The circumference will be 0.6 times as large.

**22** If *y* varies directly with *x*, and *y* is 84 when *x* is 16, which of the following represents this situation?

$$\mathbf{F} \quad y = 100x$$

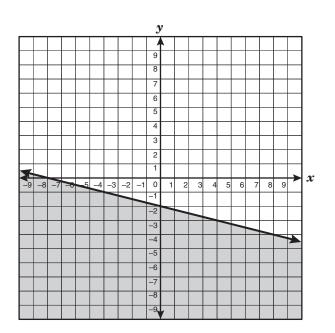

$$\mathbf{G} \quad y = \frac{21}{4}x$$

$$\mathbf{H} \quad y = 68x$$

$$\mathbf{J} \quad y = \frac{4}{21}x$$

**23** Which of the following inequalities best describes the graph shown below?

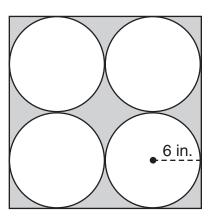

$$A \quad y \le -\frac{1}{4}x - 8$$
$$B \quad y \le -\frac{1}{4}x - 2$$
$$C \quad y \ge -\frac{1}{4}x - 8$$
$$D \quad y \ge -\frac{1}{4}x - 2$$

24 The manager of a day-care center wants to serve  $\frac{1}{2}$  pint of milk to each of the 48 children at the center each day. She can buy the milk in  $\frac{1}{2}$ -pint cartons for \$0.35 each, or she can buy 1-gallon containers of milk for \$3.26 each. Which of these best represents how much the manager will save on milk each day if she buys the milk in 1-gallon containers?

| F | \$9.78 |
|---|--------|
| G | \$2.76 |

- **H** \$7.02
- **J** \$2.91
- 25 Martina designed a painting for art class, as shown in the drawing below. Her design contains 4 circles on a square canvas. Each circle has a radius of 6 inches. The circles touch the edges of the canvas and each other, as shown below.

The shaded section of Martina's design will be painted black. Which is closest to the area that will be painted black?

- **A** 124 in.<sup>2</sup>
- **B** 463 in.  $^{2}$
- **C** 308 in.<sup>2</sup>
- **D** 116 in.<sup>2</sup>

26 A quadratic function is given below.

$$f(x) = 3x^2 - x + 6$$

What is f(2)?

**F** 40

- **G** 28
- **H** 16
- **J** 4

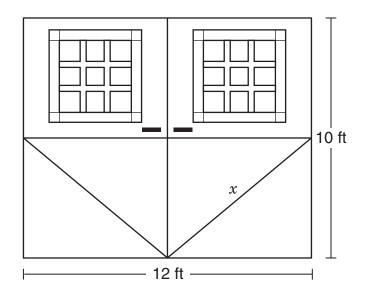

- 27 Which of the following problems can be solved using the equation 5x + 35 = 50?
  - A Tamara borrowed \$50 from a friend. The friend charged her 5% simple interest per month for *x* months. If Tamara pays her friend \$5 per month, after how many months will Tamara owe her friend \$35?
  - **B** It took Kyla 5 hours to ride her bike 35 miles. If Kyla continued riding at this same rate, how many hours, *x*, would it take her to ride 50 miles?
  - **C** Akashi made *x* deposits of \$5 each into his bank account. Then he withdrew \$35. If he had \$50 in his account, how many deposits did he make?
  - **D** Marcus purchased a new shirt for \$35 and 5 pairs of socks for *x* dollars a pair.
    Marcus spent a total of \$50. How much did each pair of socks cost?

- **28** Point *S* and point *T* are located on the same coordinate plane. Both the *x*-coordinate and the *y*-coordinate for point *S* are negative. Both the *x*-coordinate and the *y*-coordinate for point *T* are positive. Which statement about the line containing points *S* and *T* must be true?
  - **F** The graph of the line has a negative slope.
  - ${\bf G} \quad {\rm The \ graph \ of \ the \ line \ has \ a \ positive \ slope.}$
  - **H** The graph of the line has a negative *y*-intercept.
  - **J** The graph of the line has a positive *y*-intercept.

**29** The two identical rectangular doors of a barn have glass panes in the top half, and each bottom half is made of solid wood, as shown below.

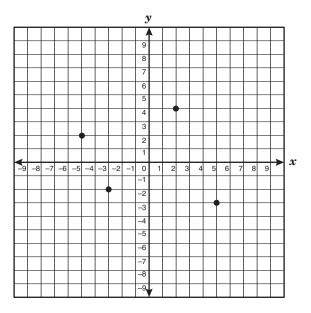

Which of the following measurements is closest to x, the length of the diagonal brace on the bottom half of each door?

- $\mathbf{A} \quad 6\frac{1}{2} \text{ ft}$
- **B** 11 ft
- **C** 8 ft
- $\mathbf{D} \quad 5\frac{1}{2} \ \mathrm{ft}$

**30** Which point on the grid below satisfies the conditions x > -2 and  $y \le 3$ ?

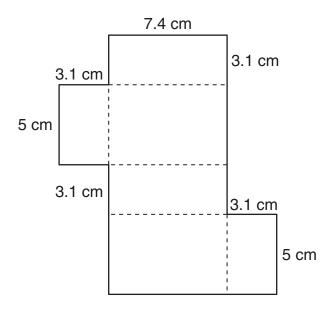

- **F** (-5, 2)
- **G** (5, -3)
- **H** (2, 4)
- **J** (-3, -2)

- **31** There are 8 sixth-grade classes and 195 sixth-grade students at Edison Middle School. The equation 8s = 195 can be used to determine *s*, the mean number of students per class. Based on the solution s = 24.375, which of the following statements could be true?
  - A There are 5 sixth-grade classes with 24 students each and 3 sixth-grade classes with 25 students each.
  - **B** There are 7 sixth-grade classes with 24 students each and 1 sixth-grade class with 25 students.
  - C There are 8 sixth-grade classes with 25 students each.
  - **D** There are 8 sixth-grade classes with 24 students each.

- **32** The volume of a cube is  $125x^{3}y^{3}$  cubic units, and the area of its base is  $25x^{2}y^{2}$  square units. What is the length of an edge of the cube in units if x > 0 and y > 0?
  - **F**  $\frac{5}{xy}$  units
  - **G**  $5x^{5}y^{5}$  units
  - **H** 5xy units
  - J 100xy units

What is the total surface area of the rectangular prism represented by this net?

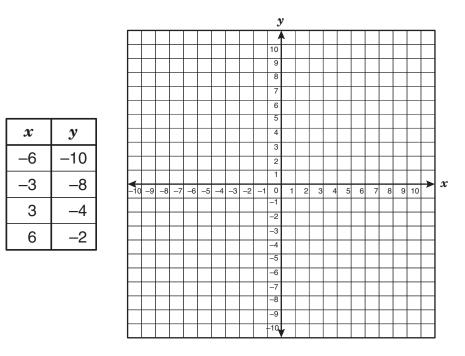

- **A** 114.70 cm<sup>2</sup>
- **B** 150.88 cm<sup>2</sup>
- $C = 105.00 \text{ cm}^2$
- **D** 119.88 cm<sup>2</sup>
- **34** Carmen received a \$0.25 raise in her hourly pay rate. Her first paycheck after the raise showed a total pay of \$308 for 40 hours of work. Which method can be used to determine what Carmen's hourly pay rate was before the raise?
  - **F** Subtract 0.25 from 40 and then divide 308 by this difference
  - G Divide 308 by 40 and then add 0.25 to this quotient
  - **H** Multiply 0.25 by 40 and then divide 308 by this product
  - J Divide 308 by 40 and then subtract 0.25 from this quotient

- **35** If *y* is a function of *x* in  $y = \frac{1}{2}x + 3$ , which of the following statements is true?
  - **A** The independent variable, *y*, is 3 more than  $\frac{1}{2}$  the dependent variable, *x*.
  - **B** The dependent variable, *y*, is 3 more than  $\frac{1}{2}$  the independent variable, *x*.
  - C The independent variable, x, is 3 more than  $\frac{1}{2}$  the dependent variable, y.
  - **D** The dependent variable, *x*, is 3 more than  $\frac{1}{2}$  the independent variable, *y*.

- **36** Which expression is equivalent to 3 times the sum of *x* squared and 7?
  - **F**  $3x^2 + 7$
  - **G**  $(3x + 7)^2$
  - **H**  $3(x+7)^2$
  - **J**  $3(x^2 + 7)$

**37** The table below shows ordered pairs of a linear function.

What are the *x*- and *y*-intercepts for the graph of this linear function?

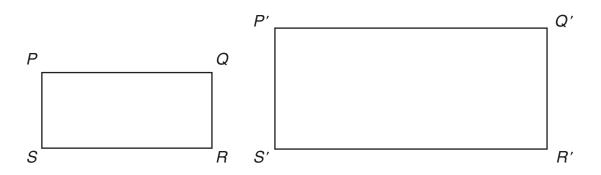

- A *x*-intercept: (-6, 0) *y*-intercept: (0, 9)
- **B** *x*-intercept: (0, -6) *y*-intercept: (9, 0)
- **C** *x*-intercept: (0, 9) *y*-intercept: (-6, 0)
- **D** *x*-intercept: (9, 0)

*y*-intercept: (0, -6)

- **38** Mr. Sylvester bought gardening supplies for \$79.75, not including tax. If the tax rate was 8%, what was the total cost of these gardening supplies, including tax?
  - **F** \$86.13
  - **G** \$73.37
  - **H** \$87.75
  - J Not here

**39** Use the ruler on the Mathematics Chart to measure the side lengths of rectangle PQRS and rectangle P'Q'R'S' to the nearest 0.1 centimeter.

Which of the following is closest to the scale factor used to dilate rectangle PQRS to create rectangle P'Q'R'S'?

- **A** 0.625
- **B** 1.6
- **C** 0.525
- **D** 2.0

**40** If the graph of  $y = \frac{3}{4}x^2 - 1$  is translated up 4 units, which of the following equations represents the resulting graph?

- **F**  $y = 3x^2 4$
- **G**  $y = \frac{3}{4}x^2 + 3$
- **H**  $y = 3x^2 + 4$
- $\mathbf{J} \quad y = \frac{3}{4}x^2 5$

41 A student tried to solve the following equation but made a mistake.

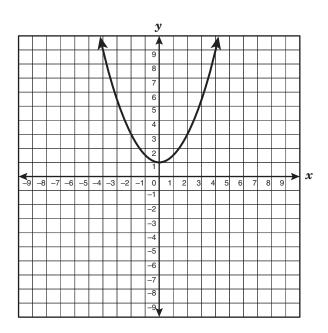

| Step 1: | 9 - 5(2x + 1) = -28 |
|---------|---------------------|
| Step 2: | 4(2x + 1) = -28     |
| Step 3: | 8x + 4 = -28        |
| Step 4: | 8x = -32            |
| Step 5: | x = -4              |

In which step did the mistake first appear?

- A Step 2
- B Step 3
- C Step 4
- D Step 5

- 42 Desmond wants to take guitar lessons. The one-time registration fee is \$60, and each lesson costs \$40. Which of the following inequalities can Desmond use to determine x, the number of lessons he can take if he wants to spend no more than c dollars?
  - **F**  $60x + 40x \le c$
  - **G**  $60 + 40x \le c$
  - **H**  $60x + 40x \ge c$
  - $\mathbf{J} \quad 60 + 40x \ge c$

**43** What is the parent function of the graph shown on the grid below?

A y = -x

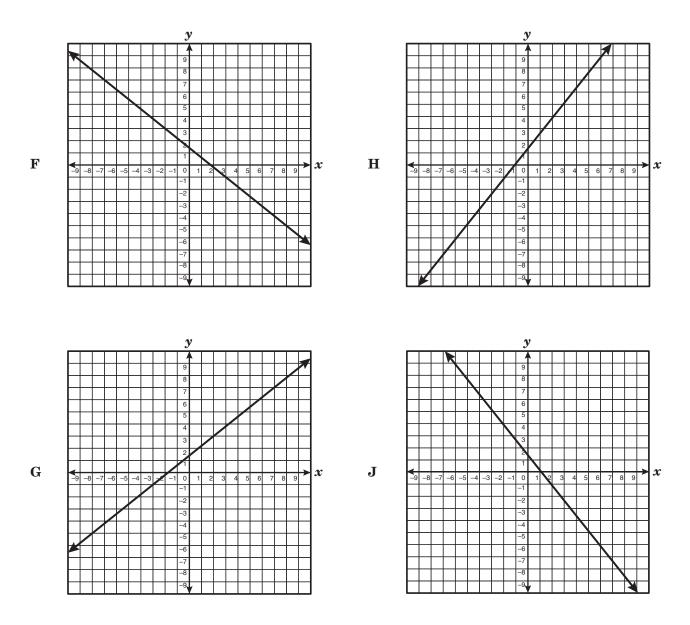

**B** 
$$y = -x^2$$

- $\mathbf{C} \quad y = x$
- $\mathbf{D} \quad y = x^{2}$

- 44 Tyler wants to buy a video-game system for \$375. He can pay for the system in 12 months if he pays \$75 now and \$25 each month. How will the number of monthly payments be affected if Tyler pays \$75 now and \$30 each month?
  - **F** He will make 10 fewer monthly payments.
  - ${\bf G} \quad {\rm He \ will \ make \ 2 \ fewer \ monthly \ payments.}$
  - ${\bf H}~$  He will make 3 fewer monthly payments.
  - **J** He will make 5 fewer monthly payments.

- **45** A company designed a new label to completely cover the lateral surface area of a cylindrical can without any overlap. The can is  $5\frac{1}{2}$  inches tall and 3 inches in diameter. Which of the following is closest to the area of this new label?
  - **A** 52 in.  $^{2}$
  - **B** 160 in.<sup>2</sup>
  - **C** 104 in.  $^{2}$
  - **D** 66 in.  $^{2}$

- **47** Which expression represents the area of a rectangle with sides measuring  $x^2y$  and  $2xy^2$ ?
  - **A**  $2x^{3}y^{3}$
  - **B**  $2x^{2}y^{2}$
  - **C**  $4x^{4}y^{3}$
  - **D**  $4x^{3}y^{4}$

**48** The table shows values for the independent and dependent quantities in a functional relationship.

| Independent<br>Quantity | Dependent<br>Quantity |
|-------------------------|-----------------------|
| 0                       | 8                     |
| 1                       | 7                     |
| 2                       | 6                     |
| 3                       | 5                     |
| 4                       | 4                     |

Which function best represents this relationship?

 $\mathbf{F} \quad f(x) = x + 8$ 

**G** 
$$f(x) = x - 8$$

$$\mathbf{H} \quad f(x) = 8 - x$$

 $\mathbf{J} \quad f(x) = -8 - x$ 

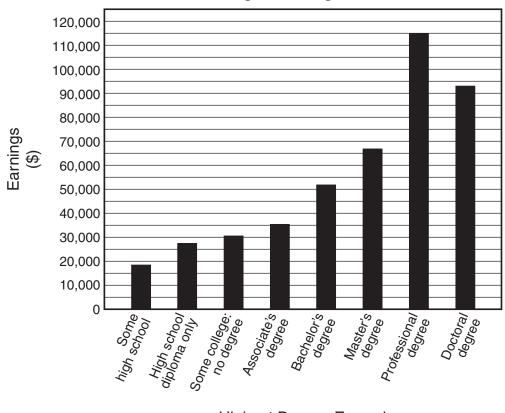

- **49** Celeste made a model of her grandfather's fishing boat using a scale where 2 inches represents 3 feet. Her grandfather's actual boat is 28 feet long. What is the length of Celeste's model boat?
  - **A**  $4\frac{2}{3}$  in.
  - **B**  $18\frac{2}{3}$  in.
  - **C** 22 in.
  - **D** 42 in.

- 50 David wants to spread wildflower seeds in a rectangular field that is 60 feet wide and 70 feet long. Each package of wildflower seeds covers about 175 square feet and costs \$6.95. Which of the following amounts is closest to the total cost of the wildflower seeds David needs for this field?
  - **F** \$24.00
  - **G** \$170.00
  - **H** \$604.00
  - **J** \$310.00

- **51** A school principal ordered 100 pizzas for a total of \$1255. Cheese pizzas cost \$11.50 each, and pepperoni pizzas cost \$13.00 each. Which of the following systems of linear equations can be used to determine c, the number of cheese pizzas the principal ordered, and p, the number of pepperoni pizzas the principal ordered?
  - **A** c + p = 10013c + 11.50p = 1255
  - **B** c p = 10013c + 11.50p = 1255
  - $\begin{array}{ll} \mathbf{C} & c+p=100 \\ & 11.50c+13p=1255 \end{array}$
  - **D** c p = 10011.50c + 13p = 1255

**52** The graph below shows the 2004 average yearly earnings of people at least 18 years old according to the highest degree they have earned.

Average Earnings in 2004

Highest Degree Earned

According to the graph, which of the following statements is true?

- **F** In 2004 a person with an associate's degree earned more than twice as much as a person with a high school diploma.
- G In 2004 a person with a high school diploma earned about 9,000 more than a person with only some high school.
- **H** In 2004 a person with a doctoral degree earned less than 3 times as much as a person with a high school diploma.
- **J** In 2004 a person with a high school diploma earned \$100,000 less than a person with a professional degree.

#### **TAKS Grade 9 Mathematics**

For a more complete description of the objectives measured, please refer to the Revised TAKS Information Booklet for Grade 9 Mathematics at <a href="http://www.tea.state.tx.us/student.assessment/taks/booklets/index.html">http://www.tea.state.tx.us/student.assessment/taks/booklets/index.html</a>.

#### **Objective 1:** The student will describe functional relationships in a variety of ways.

- (A.1) Foundations for functions. The student understands that a function represents a dependence of one quantity on another and can be described in a variety of ways. The student is expected to
  - (A) describe independent and dependent quantities in functional relationships;
  - (B) [gather and record data and] use data sets to determine functional relationships between quantities;
  - (C) describe functional relationships for given problem situations and write equations or inequalities to answer questions arising from the situations;
  - (D) represent relationships among quantities using [concrete] models, tables, graphs, diagrams, verbal descriptions, equations, and inequalities; and
  - (E) interpret and make decisions, predictions, and critical judgments from functional relationships.

## **Objective 2:** The student will demonstrate an understanding of the properties and attributes of functions.

- (A.2) **Foundations for functions.** The student uses the properties and attributes of functions. The student is expected to
  - (A) identify [and sketch] the general forms of linear (y = x) and quadratic  $(y = x^2)$  parent functions;
  - (B) identify mathematical domains and ranges and determine reasonable domain and range values for given situations, both continuous and discrete;
  - (C) interpret situations in terms of given graphs [or create situations that fit given graphs]; and
  - (D) [collect and] organize data, [make and] interpret scatterplots (including recognizing positive, negative, or no correlation for data approximating linear situations), and model, predict, and make decisions and critical judgments in problem situations.
- (A.3) Foundations for functions. The student understands how algebra can be used to express generalizations and recognizes and uses the power of symbols to represent situations. The student is expected to
  - (A) use symbols to represent unknowns and variables; and
  - (B) look for patterns and represent generalizations algebraically.
- (A.4) Foundations for functions. The student understands the importance of the skills required to manipulate symbols in order to solve problems and uses the necessary algebraic skills required to simplify algebraic expressions and solve equations and inequalities in problem situations. The student is expected to

- (A) find specific function values, simplify polynomial expressions, transform and solve equations, and factor as necessary in problem situations;
- (B) use the commutative, associative, and distributive properties to simplify algebraic expressions; and
- (C) connect equation notation with function notation, such as y = x + 1 and f(x) = x + 1.

#### **Objective 3:** The student will demonstrate an understanding of linear functions.

- (A.5) **Linear functions.** The student understands that linear functions can be represented in different ways and translates among their various representations. The student is expected to
  - (A) determine whether or not given situations can be represented by linear functions; and
  - (C) use, translate, and make connections among algebraic, tabular, graphical, or verbal descriptions of linear functions.
- (A.6) Linear functions. The student understands the meaning of the slope and intercepts of the graphs of linear functions and zeros of linear functions and interprets and describes the effects of changes in parameters of linear functions in real-world and mathematical situations. The student is expected to
  - (A) develop the concept of slope as rate of change and determine slopes from graphs, tables, and algebraic representations;
  - (B) interpret the meaning of slope and intercepts in situations using data, symbolic representations, or graphs;
  - (C) investigate, describe, and predict the effects of changes in *m* and *b* on the graph of y = mx + b;
  - (D) graph and write equations of lines given characteristics such as two points, a point and a slope, or a slope and *y*-intercept;
  - (E) determine the intercepts of the graphs of linear functions and zeros of linear functions from graphs, tables, and algebraic representations;
  - (F) interpret and predict the effects of changing slope and y-intercept in applied situations; and
  - (G) relate direct variation to linear functions and solve problems involving proportional change.

#### **Objective 4:** The student will formulate and use linear equations and inequalities.

- (A.7) Linear functions. The student formulates equations and inequalities based on linear functions, uses a variety of methods to solve them, and analyzes the solutions in terms of the situation. The student is expected to
  - (A) analyze situations involving linear functions and formulate linear equations or inequalities to solve problems;
  - (B) investigate methods for solving linear equations and inequalities using [concrete] models, graphs, and the properties of equality, select a method, and solve the equations and inequalities; and

- (C) interpret and determine the reasonableness of solutions to linear equations and inequalities.
- (A.8) **Linear functions.** The student formulates systems of linear equations from problem situations, uses a variety of methods to solve them, and analyzes the solutions in terms of the situation. The student is expected to
  - (A) analyze situations and formulate systems of linear equations in two unknowns to solve problems.

**Objective 5:** The student will demonstrate an understanding of quadratic and other nonlinear functions.

- (A.9) Quadratic and other nonlinear functions. The student understands that the graphs of quadratic functions are affected by the parameters of the function and can interpret and describe the effects of changes in the parameters of quadratic functions. The student is expected to
  - (C) investigate, describe, and predict the effects of changes in c on the graph of  $y = ax^2 + c$ .
- (A.11) Quadratic and other nonlinear functions. The student understands there are situations modeled by functions that are neither linear nor quadratic and models the situations. The student is expected to
  - (A) use [patterns to generate] the laws of exponents and apply them in problem-solving situations.

# **Objective 6:** The student will demonstrate an understanding of geometric relationships and spatial reasoning.

- (8.6) **Geometry and spatial reasoning.** The student uses transformational geometry to develop spatial sense. The student is expected to
  - (A) generate similar figures using dilations including enlargements and reductions; and
  - (B) graph dilations, reflections, and translations on a coordinate plane.
- (8.7) **Geometry and spatial reasoning.** The student uses geometry to model and describe the physical world. The student is expected to
  - (D) locate and name points on a coordinate plane using ordered pairs of rational numbers.

# **Objective 7:** The student will demonstrate an understanding of two- and three-dimensional representations of geometric relationships and shapes.

- (8.7) **Geometry and spatial reasoning.** The student uses geometry to model and describe the physical world. The student is expected to
  - (A) draw three-dimensional figures from different perspectives;
  - (B) use geometric concepts and properties to solve problems in fields such as art and architecture; and

(C) use pictures or models to demonstrate the Pythagorean Theorem.

# Objective 8: The student will demonstrate an understanding of the concepts and uses of measurement and similarity.

- (8.8) **Measurement.** The student uses procedures to determine measures of three-dimensional figures. The student is expected to
  - (A) find lateral and total surface area of prisms, pyramids, and cylinders using [concrete] models and nets (two-dimensional models);
  - (B) connect models of prisms, cylinders, pyramids, spheres, and cones to formulas for volume of these objects; and
  - (C) estimate measurements and use formulas to solve application problems involving lateral and total surface area and volume.
- (8.9) **Measurement.** The student uses indirect measurement to solve problems. The student is expected to
  - (A) use the Pythagorean Theorem to solve real-life problems; and
  - (B) use proportional relationships in similar two-dimensional figures or similar three-dimensional figures to find missing measurements.
- (8.10) **Measurement.** The student describes how changes in dimensions affect linear, area, and volume measures. The student is expected to
  - (A) describe the resulting effects on perimeter and area when dimensions of a shape are changed proportionally; and
  - (B) describe the resulting effect on volume when dimensions of a solid are changed proportionally.

# **Objective 9:** The student will demonstrate an understanding of percents, proportional relationships, probability, and statistics in application problems.

- (8.1) **Number, operation, and quantitative reasoning.** The student understands that different forms of numbers are appropriate for different situations. The student is expected to
  - (B) select and use appropriate forms of rational numbers to solve real-life problems including those involving proportional relationships.
- (8.3) **Patterns, relationships, and algebraic thinking.** The student identifies proportional or nonproportional linear relationships in problem situations and solves problems. The student is expected to
  - (B) estimate and find solutions to application problems involving percents and other proportional relationships such as similarity and rates.
- (8.11) **Probability and statistics.** The student applies concepts of theoretical and experimental probability to make predictions. The student is expected to

- (A) find the probabilities of dependent and independent events; and
- (B) use theoretical probabilities and experimental results to make predictions and decisions.
- (8.12) **Probability and statistics.** The student uses statistical procedures to describe data. The student is expected to
  - (A) select the appropriate measure of central tendency or range to describe a set of data and justify the choice for a particular situation; and
  - (C) select and use an appropriate representation for presenting and displaying relationships among collected data, including line plots, line graphs, [stem and leaf plots,] circle graphs, bar graphs, box and whisker plots, histograms, and Venn diagrams, with and without the use of technology.
- (8.13) **Probability and statistics.** The student evaluates predictions and conclusions based on statistical data. The student is expected to
  - (B) recognize misuses of graphical or numerical information and evaluate predictions and conclusions based on data analysis.

# **Objective 10:** The student will demonstrate an understanding of the mathematical processes and tools used in problem solving.

- (8.14) **Underlying processes and mathematical tools.** The student applies Grade 8 mathematics to solve problems connected to everyday experiences, investigations in other disciplines, and activities in and outside of school. The student is expected to
  - (A) identify and apply mathematics to everyday experiences, to activities in and outside of school, with other disciplines, and with other mathematical topics;
  - (B) use a problem-solving model that incorporates understanding the problem, making a plan, carrying out the plan, and evaluating the solution for reasonableness; and
  - (C) select or develop an appropriate problem-solving strategy from a variety of different types, including drawing a picture, looking for a pattern, systematic guessing and checking, acting it out, making a table, working a simpler problem, or working backwards to solve a problem.
- (8.15) **Underlying processes and mathematical tools.** The student communicates about Grade 8 mathematics through informal and mathematical language, representations, and models. The student is expected to
  - (A) communicate mathematical ideas using language, efficient tools, appropriate units, and graphical, numerical, physical, or algebraic mathematical models.
- (8.16) **Underlying processes and mathematical tools.** The student uses logical reasoning to make conjectures and verify conclusions. The student is expected to
  - (A) make conjectures from patterns or sets of examples and nonexamples; and
  - (B) validate his/her conclusions using mathematical properties and relationships.
